

WELDCOTE CHAMFER ARC

Description- Weldcote Chamfer Arc is used for gouging and cleaning of faulty welds of metals like cast iron, stainless steels, and aluminum for which the oxy-acetylene method is not applicable.

Features- Weldcote Chamfer Arc is a heavily coated special gouging electrode which is very easy to use. For arc start, it is held perpendicular and then leaned 15° and pulled forward. It should not be pushed into the work more than half the coating thickness. If the groove is not deep enough the process should be repeated after the work piece has cooled.

Available diameters and packages:

Diameters- 1/8" , 5/32" , & 3/16"

Packaged in 3-8 pound tubes in a 24 pound master carton
